

# ANTI PTOSIS THREADS AND METHODS

APTOS LIFT —

# 21<sup>ST</sup> CENTURY ANTI-AGE TREATMENT OF CHOICE!

Aptos thread lifting methods

## What you need to know about the non-surgical treatment

As the effects of gravity become more noticeable on our faces, the supporting tissue of the cheeks weakens and starts to sag, facial fat is lost, the jaw line that used to be firm and tight forms jowls at the edges of the mouth that drift down towards the chin, and the lower face and neck sag. This sagging or drooping action of the tissue is considered by doctors as ptosis. Traditionally, the tendency for sagging would lead most people to a cosmetic surgeon in search of a facelift; however, there is now a less invasive procedure available which can lift, contour and suspend the sagging tissues of the face, neck and body in those people who need only little to moderate rejuvenation.

Thread lifting is a procedure which involves elevating various parts of the face and body using specially designed threads without having to make incisions as during the conventional face lift. After the procedure skin starts to produce more collagen and elastin which gives a longer-lasting result - besides lifting, threads improve skin tone, texture, color and hydration. Results are evident immediately after the procedure and can last from 1,5 to 5 years, depending on the thread composition.

## Aptos - 4 types of threads

### Bidirectional threads

The thread has opposing bidirectional barbs situated along the entire length, which help to adhere to tissue underneath the skin.

### Multidirectional threads

Multidirectional barbs situated along entire length, which help to adhere to tissue underneath the skin.

### Spring threads

The thread has a smooth surface. The shape of the thread has been modified mechanically to achieve spring-spiral-like look. Due to the special form, springs enable to elevate ptotic soft tissues of mimically active zones.

### Twisted threads

Twisted pair threads without barbs. The Nano Vitis suture untwists within 10 to 15 days and thus increases in volume by 2.5-3 times by dividing into two sutures and maintaining space between them to prevent tissue ptosis.

## Procedure

**Applying Aptos threads** takes around 20 minutes in a treatment room.

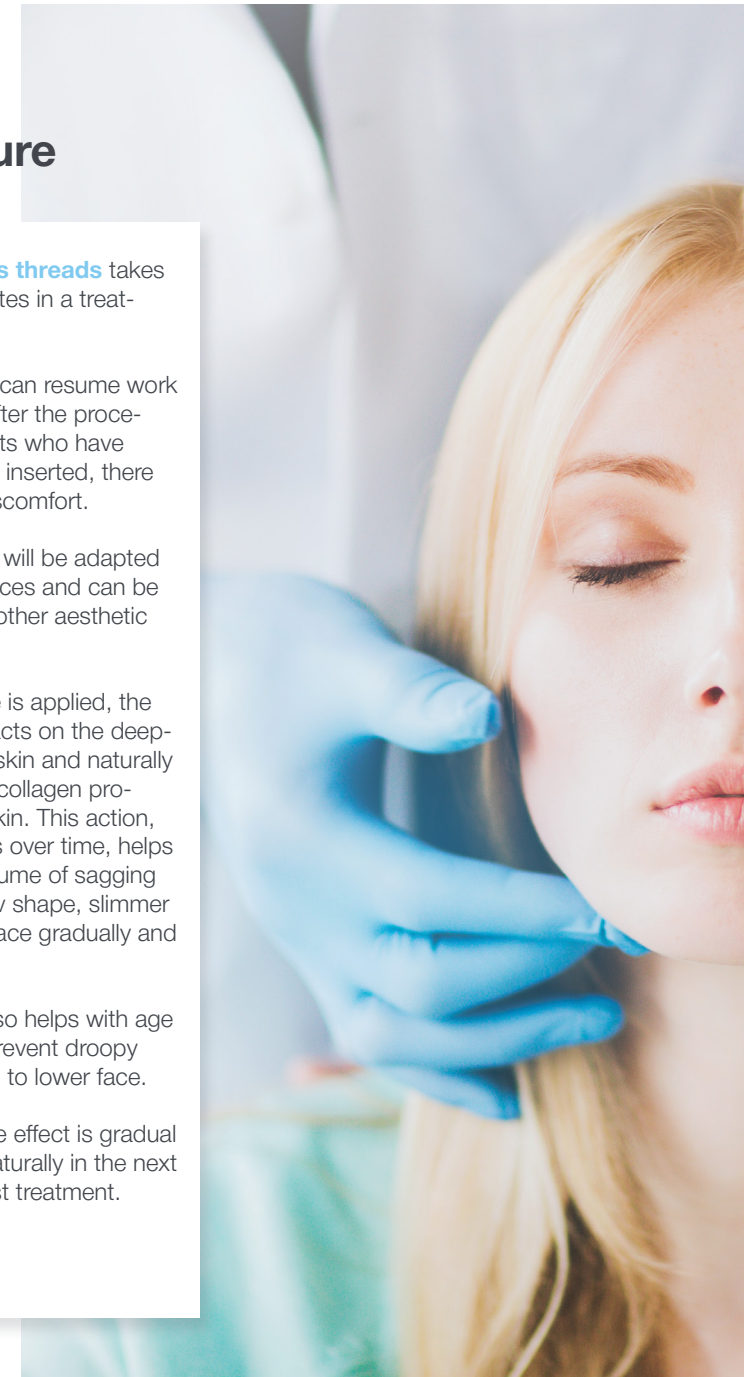

**Most patients** can resume work the same day after the procedure. For patients who have multiple threads inserted, there can be more discomfort.

**The treatment** will be adapted to your preferences and can be combined with other aesthetic procedures.

Once the suture is applied, the polylactic acid acts on the deeper layers of the skin and naturally stimulates new collagen production in the skin. This action, which continues over time, helps increase the volume of sagging areas, restores v shape, slimmer contour to the face gradually and naturally.

Aptos thread also helps with age maintenance, prevent droopy skin around mid to lower face.

The regenerative effect is gradual and happens naturally in the next few months post treatment.

## Advantages

### Advantages of Aptos lift

- 01 Double action: lifting and rejuvenation
- 02 Minimally invasive procedure performed under the local anesthesia
- 03 20 minutes procedure
- 04 Immediately evident results
- 05 Minimum of downtime
- 06 New collagen growth and increased microcirculation
- 07 Long-term effect (1,5-5 years depending on thread composition)

## Application areas

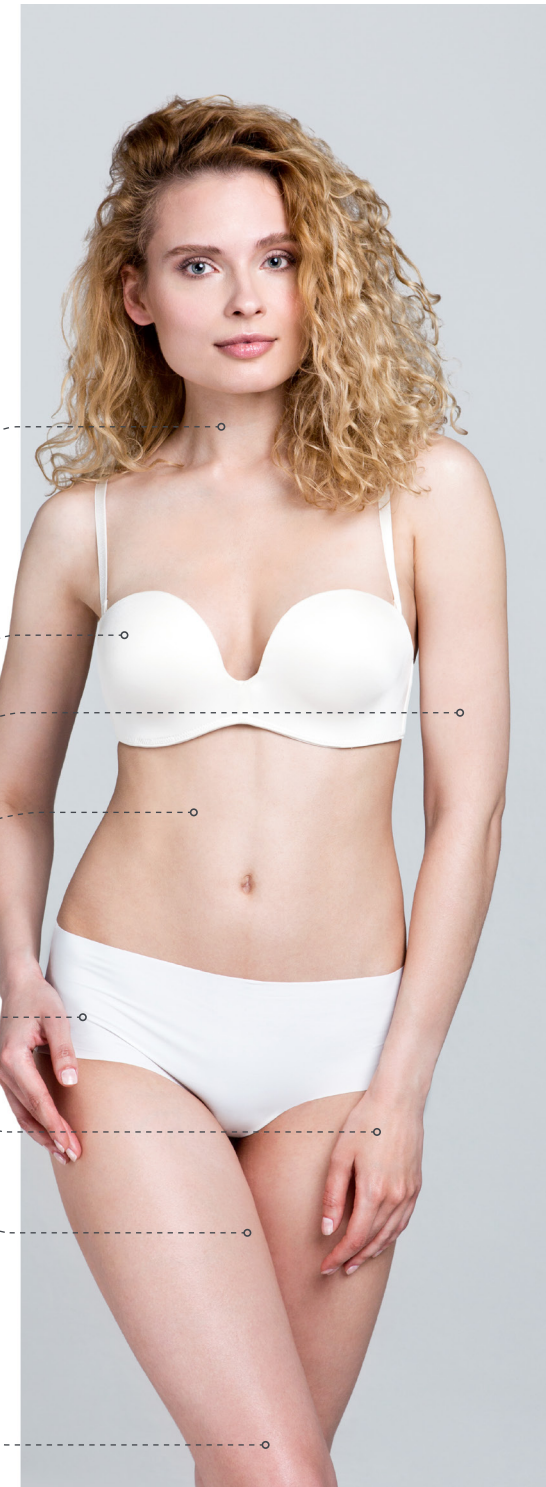

### FACE

- Cheeks & mid-face area
- Contour of the face
- Submental area
- Jaw line
- Eyebrows
- Nose
- Ears
- Lips

### BODY

- Neck
- Breast
- Arms
- Abdomen
- Buttocks
- Hands
- Inner thighs
- Knees

Aptos thread lifting methods

# Armoring, lifting & rejuvenation = triple effect!

## Under 30

If you are under 30, thread lift is the best resolution to prevent skin sagging and wrinkles.

## 30 to 40

If you are 30 to 40 years old, thread lift is the best treatment which creates armoring frame and strengthens facial stand

## 40 to 50

If you are 40 to 50 years old, thread lift is a must have treatment, which gives immediate lifting, armoring and rejuvenation effect at the same time.

## 50 & more

If you are 50 and more, we are ready to create a custom-tailored series of procedures and reverse the age back!

## Aptos

## Aptos - Thread lifting methods

Aptos is the brand of biodegradable threads for the purpose of face & body lifting. It's a short form of ANTI PTOSIS (anti laxity).

Over the years, Aptos threads have received worldwide recognition and won many awards as a safe medical device for non-surgical face and body lifting.

The threads have evolved to their 3rd generation with added Hyaluronic acid composition, and currently being launched worldwide.
